US Strategy Weekly Liquidity Crisis

LOOKING FOR A 90% UP DAY

There are several extremes appearing in technical data that suggest this bear market is nearing, or already in its final phase. However, few bear market lows are quick or V-shaped. This is particularly true when the low precedes, or is accompanied by, a recession. And we think this one is. Most bear market troughs resemble a checkmark or a W-shape and take weeks or months to complete. In short, we believe it is much too late to be bearish, but we would not be too hasty to re-enter the equity market.

Although the equity market has declined to a level that could generate a short-covering rally, we believe the resistance at SPX 4100 may be a formidable hurdle. This can be seen in the charts of the indices on page 8. The late May rally encountered resistance at the 50-day moving averages in each of the popular indices. And though the last two weeks have generated a number of downside gaps that are likely to be filled in the near future, the 50-day moving average, now at SPX 4102.46, could prove to be a hurdle once again.

And as we noted last week, it would be prudent to wait for a solid 90% up-volume day accompanied by volume that is well above average, before adding to portfolios. Strong volume and at least a 10 to one positive breadth day would be a pivotal sign that panic selling is exhausted and that buyers have come back to the marketplace with conviction. This is particularly important since recent trading sessions have included worrisome signs of a liquidity crisis.

LIQUIDITY CRISIS - THE SOURCE

The liquidity crisis is not equity-centric and may stem from the volatility seen in the cryptocurrency market. Bitcoin (BTC - \$20,825.00), the bellwether of the cryptocurrency market, has seen a 75% decline from its high. The world's most-traded cryptocurrency, fell from nearly \$69,000 last year, to \$17,776.75 over the weekend, which led to forced liquidations of many large leveraged bets. Some crypto analysts have been worried about a complete capitulation of the market, particularly after Celsius Network, a private company, and a popular cryptocurrency lender, froze customers' accounts last week leaving its customers unable to withdraw or transfer funds.

More than \$2 trillion has been wiped from the crypto market since its peak last November, according to Yahoo News, and since money is fungible, losses of this size often create a liquidity crisis in the broader securities markets. What is noteworthy is that a liquidity crisis is not unusual at the end of a bear market, and in fact, is another sign that we may be nearing the finale of this cycle. Nevertheless, a liquidity crisis can be vicious. It is completely disconnected from economics, fundamentals, and technicals, and is simply a massive de-leveraging wave.

For important disclosures and analyst certification please refer to the last page of this report.

Again, there are reasons to be optimistic for the second half of the year, but this is still a dangerous time, and it is wise to be cautious.

RECESSION TALK

In our opinion, it is good news that market watchers have become obsessed with the prospects of a recession. Some economists even agree with me that we may already be in the middle of a recession. This is another ingredient that has been missing for a washed-out market. On the other hand, we have yet to see earnings forecasts come down. That may be the last and final phase of this bear cycle. But analysts tend to be trend followers and rarely identify turning points, so cuts in earnings estimates may not appear until the third quarter.

Similarly, there is good news in investor sentiment indicators. Last week's AAII readings of 19.4% bulls and 58.3% bears were the third week in which a combination of less than 20% bulls and more than 50% bears has appeared since April 27, 2022. Prior to this string, there were comparable single-week readings on April 11, 2013, and January 10, 2008; however, neither of these readings coincided with a market low. The 4-week AAII bullish reading of 19% on April 27 was the lowest since 1990 and the bearish 52.9% reading of May 18 was the highest since the March 5, 2009 peak of 70.3%. These are some of the most extreme readings seen in years and according to AAII, equity prices tend to be higher in the next six and/or twelve months following such a combination. See page 11.

RECESSION WATCH

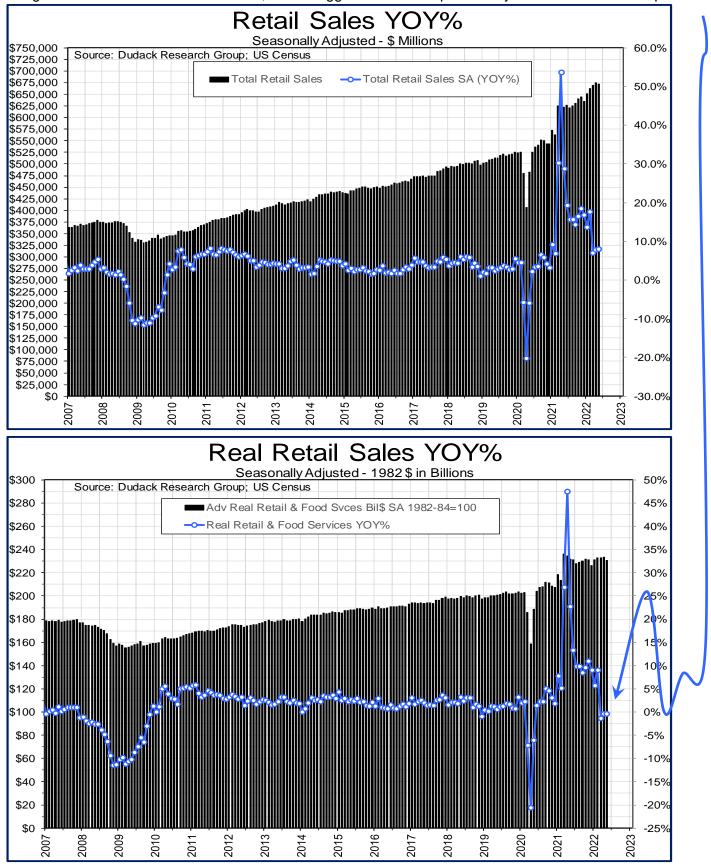

Inflation is an insidious problem that eats into household consumption and also erodes corporate profit margins. For example, the charts on page 3 display the difference between nominal and real retail sales. May's retail sales were disappointing but still rose 8.1% YOY. However, after adjusting for inflation, real retail sales fell 0.4% YOY. Year-over-year real retail sales have been negative for three consecutive months, which suggests that second quarter profits for many retailers may decline from first quarter's weak results. The weakness in May sales was centered in autos, appliances, and nonretail stores. Gains were seen in necessities such as gas and food. For the month of May, sales from food and beverage stores, food service and drinking places, and gasoline stations totaled 34% of total retail sales. This was actually less than we expected but remember that retail sales measures merchandise and does not include necessities such as housing and healthcare expenses. See pages 3-4.

The NAHB Housing index has been declining every month this year and in May it hit its lowest level since the pandemic shutdown in early 2020. Existing median home prices, however, reached a cyclical high of \$414,200, up 15% YOY. Unfortunately, with prices and mortgage rates rising rapidly, this means many prospective buyers will be priced out of the market. Note that in May single-family existing home sales were down 8.6% YOY. This decline may steepen in coming months which is unfortunate since the housing sector typically represents 15% to 18% of US GDP. See page 5.

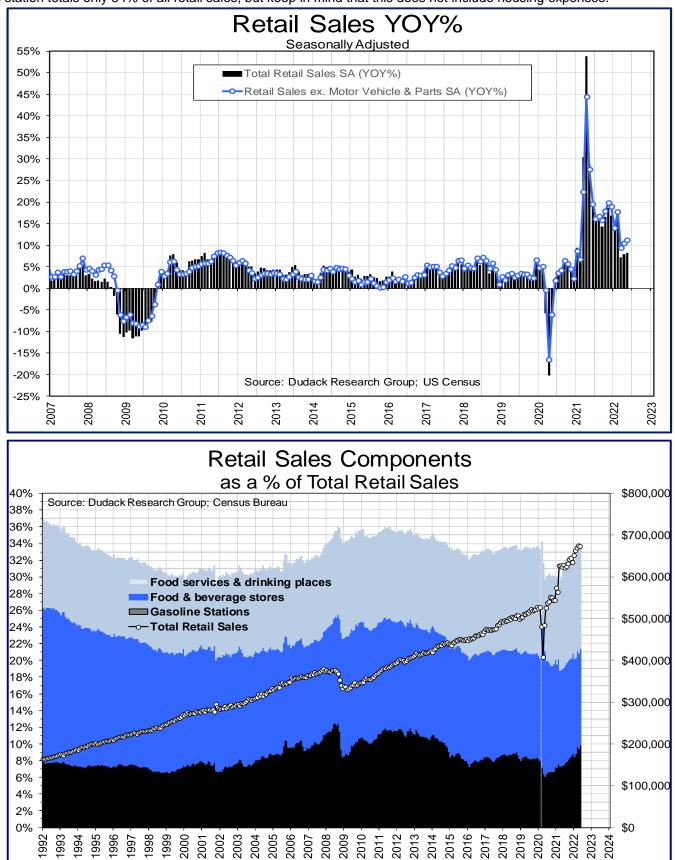

Rates for a typical 30-year mortgage, which were hovering just above 3.1% at the beginning of the year, are now close to 6%. And rates are apt to go higher as the Fed continues to raise the fed funds rate. Investors are focusing on the Fed's "terminal" fed funds rate which the consensus expects to be near 4%. But, with inflation currently at 8.6%, this still equates to a negative (i.e., easy) fed funds rate, which means the Fed may need to lift rates even higher than 4% to really curtail inflation. See page 6.

When we look at the history of inflation and the fed funds rate it becomes clear that whenever inflation reaches 4% YOY, a recession has always followed. More importantly, history shows that it often takes more than one tightening cycle and more than one recession to truly reverse an inflation cycle once headline CPI exceeds the 4% YOY level. See page 6. In short, we may not see a buy-and-hold cycle in equities for a very long time.

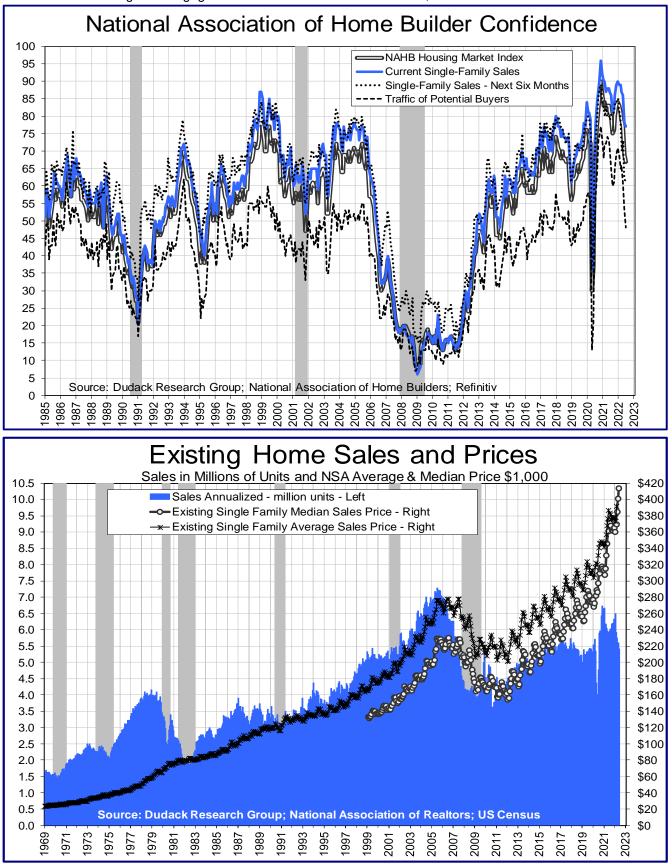

Inflation is an insidious problem that eats into household consumption and erodes profits. The charts below display the difference between nominal and real retail sales. After inflation, year-over-year real retail sales have been negative for three consecutive months, which suggests that 2Q22 profits may decline from the first quarter.

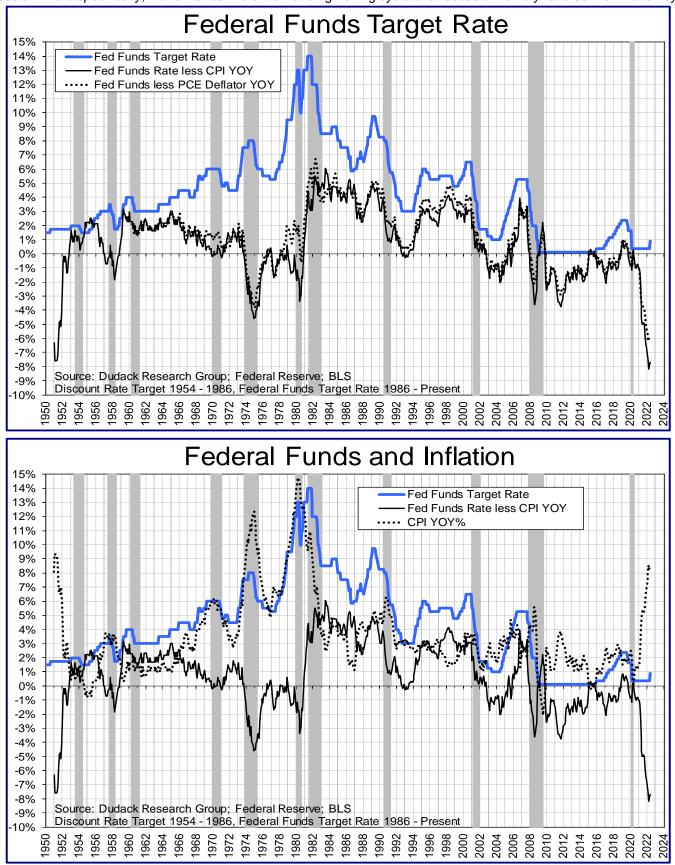

May's retail sales disappointed the consensus although headline sales were up 8.1% YOY. But after inflation this became a decline of 0.4% YOY. Surprisingly, the combination of sales in food & beverage stores, food service & drinking places and gas station totals only 34% of all retail sales, but keep in mind that this does not include housing expenses.

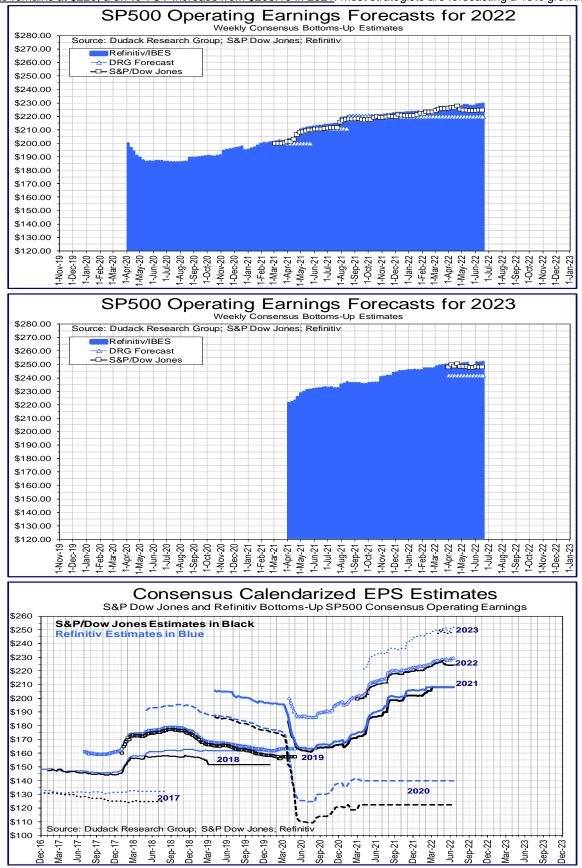

The NAHB Housing index has declined every month this year, reaching its lowest level in May since the pandemic shutdown in early 2020. Existing median home prices, however, reached a cyclical high of \$414,200, up 15% YOY, although sales were down 8.6% YOY. Higher mortgage rates will reduce demand and sales, in our view.

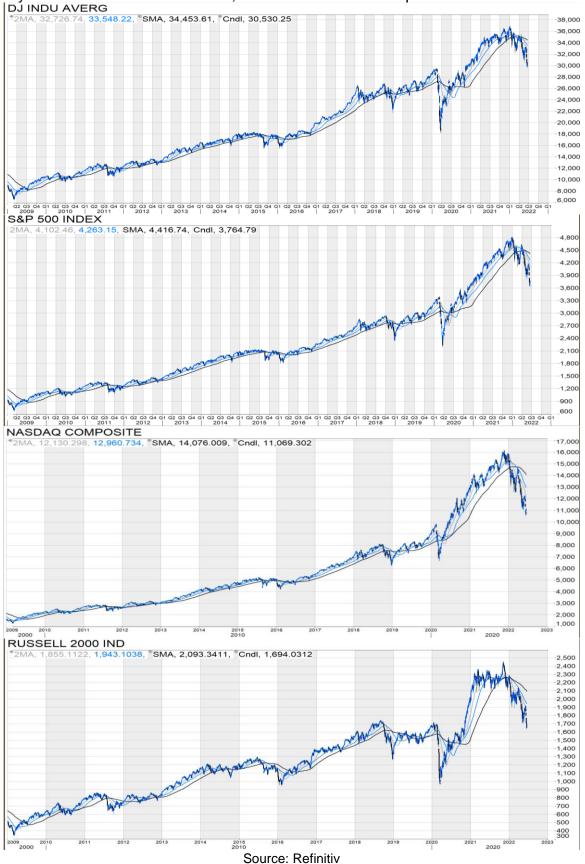

Investors are focused on the Fed's "terminal" fed funds rate which the consensus expects to be near 4%. But, with inflation at 8.6%, this equates to a negative (i.e., easy) fed funds rate. Note that inflation over 4% YOY has always resulted in a recession. More specifically, it often takes more than one tightening cycle and recession to truly reverse the inflation cycle.

The S&P Dow Jones and Refinitiv IBES consensus earnings estimates for 2022 were unchanged and rose \$0.20, respectively, this week but the nominal earnings range remained at \$224 to \$229. Earnings growth rates for this year were unchanged at 7.7% and 10.3%, respectively. (*Note: consensus macro-EPS forecasts may differ from four quarter analysts' forecast sums seen on page 16.*) Our DRG 2022 estimate remains at \$220, a 5.7% YOY increase from \$208.19 in 2021. Most strategists are forecasting a 10% growth rate in 2023.

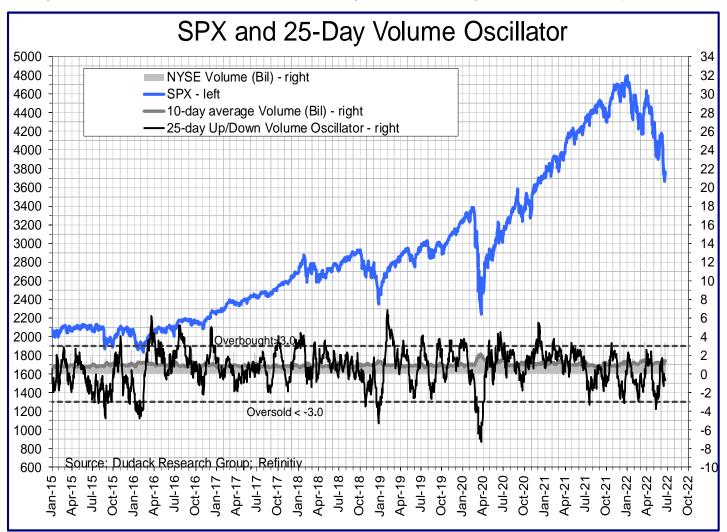

The precipitous declines seen in these charts is unsustainable in the long-term and also implies a shortcovering rally should materialize. However, the SPX 4100 level is apt to be a first-line of resistance.

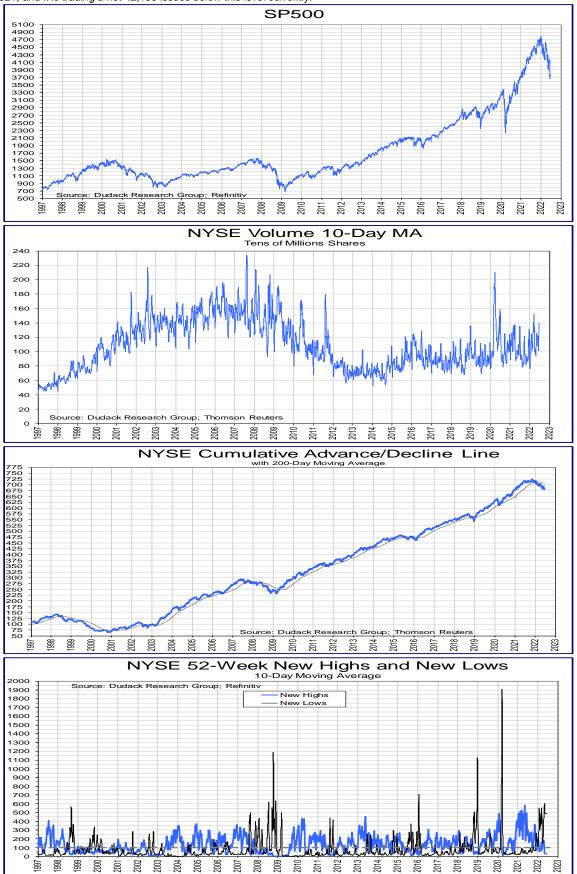

The 25-day up/down volume oscillator fell to negative 0.65 this week, after recording three 90% down days on June 9 (93%), June 13 (98%), and June 16 (94%). While our 10-day volume oscillator is oversold, the 25-day oscillator remains in neutral range. The May 10 reading of minus 3.8 was the most oversold reading recorded since April 1, 2020; however, in March and April of 2020, the market was in oversold territory for 25 of 28 consecutive trading sessions.

There were four previous 90% down days (April 22: 90%; May 5: 93%; May 9: 92%; May 18 93%) and as often noted, history suggests that extreme down days usually come in a series. A series of 90% down days reflects panic selling and is characteristic of the end of a bear market cycle. The first sign of selling exhaustion emerges when a 90% up day materializes. A 92% up day did appear on May 13 which we believe signals an exhaustion in selling pressure and the beginning of the final phase, but not necessarily the final low, of a bear market. Not surprisingly, this 90% up day appeared after the SPX slipped below the 4000 level, where investors can begin to find and define "value" in the broader marketplace. We would like to see another 90% up day in coming sessions to indicate that downside risk is minimized.

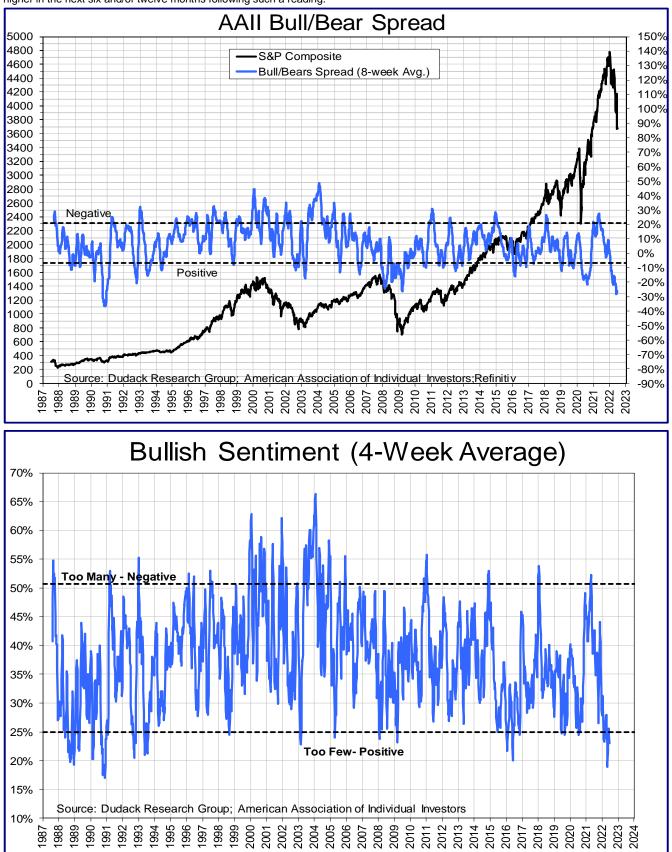

This 25-day up/down volume oscillator measures buying and selling momentum. New highs should be accompanied by strong and consistent buying pressure which results in long and sometimes extreme overbought readings. An absence of overbought readings at a new high reveals a weakness in the trend and is a sign of waning demand and/or investors selling into strength. Conversely, significant lows are often accompanied by panic selling. For example, an extreme oversold reading in this indicator, followed by a shallower oversold reading despite a new low in price indicates that selling pressure is fading and the lows are likely in place.

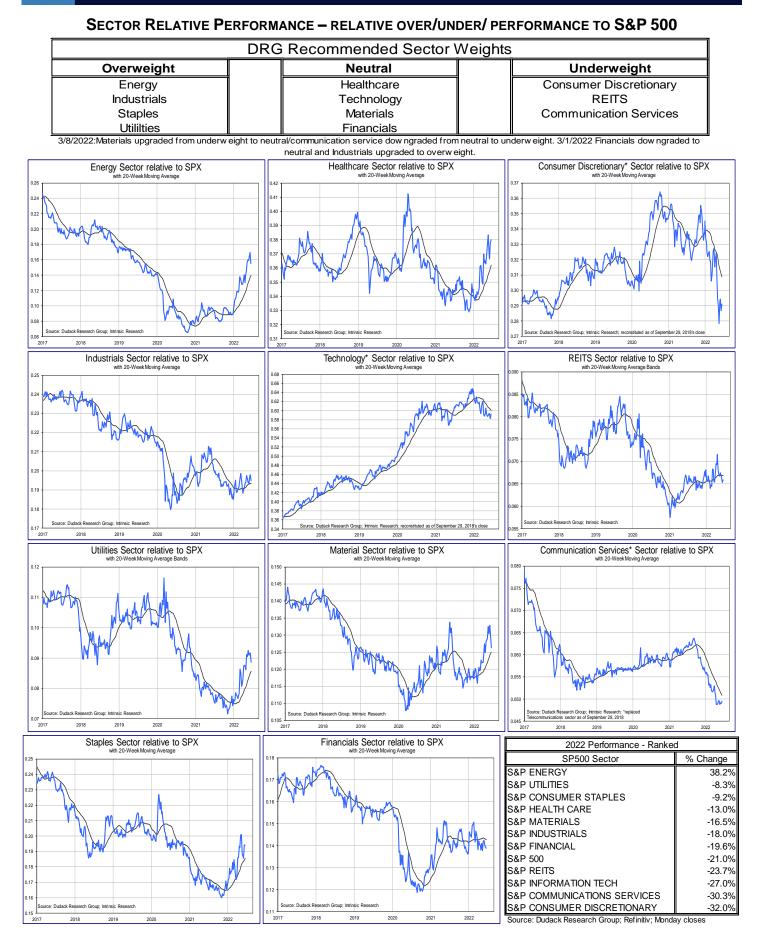

The 10-day average of daily new highs is 29 this week and daily new lows are 487. This combination is negative with new highs below 100, and new lows above the 100 benchmark. However, note that 10-day average new lows peaked at 604 in early May. The advance/decline line's last record high was on November 8, 2021, and it is trading a net 42,139 issues below this level currently.

Last week's AAII readings of 19.4% bulls and 58.3% bears were the third combination of less than 20% bulls and more than 50% bears since April 27, 2022. Prior to this string, there were comparable single week readings on April 11, 2013 and January 10, 2008. The 4-week bullish reading of 19% on April 27 was the lowest since 1990 and the bearish 52.9% reading of May 18 was the highest since the March 5, 2009 peak of 70.3%. Equity prices tend to be higher in the next six and/or twelve months following such a reading.

Regulation AC Analyst Certification

I, Gail Dudack, hereby certify that all the views expressed in this report accurately reflect my personal views about the subject company or companies and its or their securities. I also certify that no part of my compensation was, is, or will be, directly or indirectly related to the specific views contained in this report.

IMPORTANT DISCLOSURES

RATINGS DEFINITIONS:

Sectors/Industries:

"Overweight": Overweight relative to S&P Index weighting "Neutral": Neutral relative to S&P Index weighting "Underweight": Underweight relative to S&P Index weighting

Other Disclosures

This report has been written without regard for the specific investment objectives, financial situation, or particular needs of any specific recipient, and should not be regarded by recipients as a substitute for the exercise of their own judgment. The report is published solely for informational purposes and is not to be construed as a solicitation or an offer to buy or sell securities or related financial instruments. The securities described herein may not be eligible for sale in all jurisdictions or to certain categories of investors. The report is based on information obtained from sources believed to be reliable, but is not guaranteed as being accurate, nor is it a complete statement or summary of the securities, markets or developments referred to in the report. Any opinions expressed in this report are subject to change without notice and Dudack Research Group division of Wellington Shields & Co. LLC. (DRG/Wellington) is under no obligation to update or keep current the information contained herein. Options, derivative products, and futures are not suitable for all investors, and trading in these instruments is considered risky. Past performance is not necessarily indicative of future results, and yield from securities, if any, may fluctuate as a security's price or value changes. Accordingly, an investor may receive back less than originally invested. Foreign currency rates of exchange may adversely affect the value, price or income of any security or related instrument mentioned in this report.

DRG/Wellington relies on information barriers, such as "Chinese Walls," to control the flow of information from one or more areas of DRG/Wellington into other areas, units, divisions, groups, or affiliates. DRG/Wellington accepts no liability whatsoever for any loss or damage of any kind arising out of the use of all or any part of this report.

The content of this report is aimed solely at institutional investors and investment professionals. To the extent communicated in the U.K., this report is intended for distribution only to (and is directed only at) investment professionals and high net worth companies and other businesses of the type set out in Articles 19 and 49 of the Financial Services and Markets Act 2000 (Financial Promotion) Order 2001. This report is not directed at any other U.K. persons and should not be acted upon by any other U.K. person. Moreover, the content of this report has not been approved by an authorized person in accordance with the rules of the U.K. Financial Services Authority, approval of which is required (unless an exemption applies) by Section 21 of the Financial Services and Markets Act 2000.

Additional information will be made available upon request.
